Transportation - Railroads

In this unclassified 6-hour (estimated) course, we will review the common components associated with railroads. These will include the railroad route or right-of-way and different types and classes of facilities. With upwards of one million miles of railroads throughout the world, the imagery interpreter must be prepared to monitor their operation. Because railroads are located on all occupied continents, regardless of where you go there will be railroads within your area of responsibility. In most countries, the railroad is the quickest and cheapest method of conveying passengers and freight over long distances and over difficult terrain and a country's industrial potential may be measured by the volume of rail traffic.

Benefits

- Highly interactive and maintains student focus.
- Formal testing and record keeping.
- Questions and answers integrated with imagery for operational feel.
- LAN based – courseware can be maintained on a central server.
- Simple “point and click” user interface.
- One third more IA training can be delivered in a given period over conventional methods.
- Courseware maintenance is easy and fast.

System Requirements:

- Windows 2000, NT, XP
- 350MHz processor or faster
- 64 MB RAM (128 recommended)
- 50 Mbytes Hard Disk Space (plus up to 600 Mbytes additional disk space for each course purchased)
- 17” Monitor using 1024x768 display mode (19” recommended)
